

GETTING READY TO MAKE A PREMIERE MOVIE

- Make a Storyboard
(Some use post-it notes because they can be moved easily.)
- Scan and Size Photos
Photos should all be 320 pixels wide by 240 pixels high (the size of our movie).
- Organize the elements of your movie by following these steps:
 - Set up a folder with your full name on it on the Desktop.
 - Scan your pictures.
 - Size (320 X 240) your pictures using Photoshop or PhotoDeluxe.
 - Put sized photos in a new folder named "Sized Images" and place it inside the folder with your name on it.
 - Capture and edit video (if you are using video in your movie).
 - Put edited video in a new folder named "Video" and place it inside the folder with your name on it.
 - Do audio capture.
 - Put the audio clips in a new folder named "Audio" and place it inside the folder with your name on it.
 - Using Premiere make a title page and place it in a new folder named "Title" inside the folder with your name on it.
- Import all folders into Premiere for movie construction.
